

## QUIZ ON CLIMATE CHANGE

Name:

Place:

Date:

School Name:

Email:

---

1. Studying climate change we have found that the earth is .....  
 Cooling       Heating       No change       All of the above
2. Which of the following gas is called a greenhouse gas & is responsible for climate change?  
 Nitrogen       Noble gases       Carbon dioxide       Oxygen
3. Greenhouse gas helps in maintaining the Earth's?  
 Temperature       Water level       Smoke level       Green level
4. Human beings have contributed to increased climate change?  
 True       False
5. Which of the following human activities releases carbon dioxide into the atmosphere?  
 Burning of fossil fuels       Driving       Deforestation       All the Above
6. Climate change will causes sea level rise putting coastal cities at risk?  
 True       False
7. Climate change will have its impacts felt on which of the following?  
 Health       Food production       Infrastructure       All of these
8. Is our current infrastructure made for this kind of climate?  
 Yes, it is       No, it isn't
9. Climate change will disturbe the rain fall patterns and frequency leading to deeper droughts and more intense floods?  
 True       False
10. Climate change will impact human health and proliferate the spread of diseases like malaria and dengue?  
 True       False
11. It's too late to act on climate change?  
 True       False
12. To combat climate change we should cut our carbon emissions from fossil fuels?  
 True       False
13. Renewable energy consists of?  
 Solar       Wind       Hydro       Biomass       All of these
14. India has got a huge renewable energy (solar) potential?  
 True       False
15. In order to reduce our carbon footprint we should?  
 Car pool       Save electricity       Save water       Switch to renewable energy       All of these
